

```

classDiagram
    class UserUIInterface {
        <<interface>>
        +backButton(): void
        +deleteDataButton(): void
        +FreeMoviePanel(): void
        +setComplementDataInformation(): void
    }
    class WriteUser {
        +write(status: String, info: String): void
    }
    UserUIInterface <|-- WriteUser
  
```

The diagram illustrates the relationship between two classes: **UserUIInterface** and **WriteUser**.

- UserUIInterface** is an interface (indicated by «interface» in the top left corner). It defines four methods:
  - `backButton(): void`
  - `deleteDataButton(): void`
  - `FreeMoviePanel(): void`
  - `setComplementDataInformation(): void`
- WriteUser** is a class (indicated by «class» in the top left corner). It implements the **UserUIInterface** (indicated by a solid line with an open arrow pointing from WriteUser to UserUIInterface). It defines one method:
  - `write(status: String, info: String): void`
